## { Client's problem }

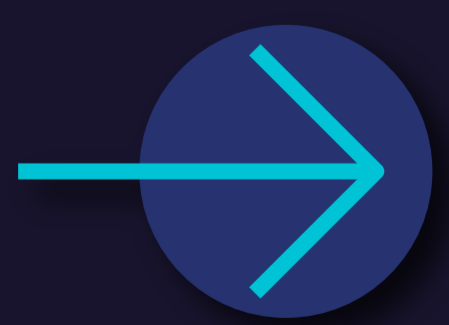

Obtain PCI DSS certification to launch the international card.

## { Our solution }

We accompany CABAL with a comprehensive 360° solution to achieve compliance with the standard. The complexity of the infrastructure and the technologies used, as well as the treatment of the data, was the great challenge with the times required by international entities. The road underwent many changes to achieve technological and cultural transformation and thus achieve the goal. The operational benefits achieved with this transformation have not only helped to solve a specific business need, but have also allowed us to lay the foundations for a new era of opportunities.

## { The client's experience }

“From the moment we started the journey towards certification, INSSIDE accompanied us at every step. It was a difficult journey with many changes. But, at the same time, exciting and constant learning. For every aspect, we find a solution with INSSIDE. We continue working and growing accompanied by INSSIDE in view of recertification in this new era of opportunities”

<Gustavo Chiarel> Head of Information Security.
